

# Weaving Machines

Through the long experience in textile industry, Sunborn has accumulated technical know-how and qualified technicians to produce up-to-date textiles. Sunborn **thru Tehran Office** is ready to support A to Z in textile field and will be the best partner for the textile mills who want to upgrade their S/W as well as H/W.

Weaving machines are used to make products such as upholstery fabric, silk and ornate carpets. They can be divided into three types: shuttle, circular, and narrow fabric. Most of these machines are for commercial use and require a certain amount of training and mechanical knowledge to use. For arts and crafts weaving, handheld knitting is still the best way to weave at home.

# 4, 9th Fl. No.216 (Iran Trade Center Bldg.) Africa Blvd., Tehran 1966944885, Tehran I.R. Iran
